

Advanced Applications of SQL

What You Will Learn.....	1
Understanding the Principles of Database Design.....	2
Enforcing Uniqueness of Data Table Records.....	2
Eliminating Redundant Data.....	4
Eliminating Data that Does Not Depend on the Key.....	6
Eliminating Unrelated Data from the Same Table.....	6
Advantages of a Relational Database.....	6
Disadvantages of a Relational Database.....	7
Exercise 1: Database Design.....	8
Creating Indexes.....	9
When to Create an Index.....	10
Understanding Clustered vs. Nonclustered Indexes.....	10
Using the CREATE INDEX Command.....	11
Viewing Index Information.....	13
Deleting an Index.....	14
Defining Primary Keys and Foreign Keys.....	15
Primary Keys.....	15
Foreign Keys.....	18
Exercise 2: Primary Keys and Foreign Keys.....	22
Establishing Referential Integrity.....	23
Using Primary Keys and Foreign Keys to Enforce Referential Integrity.....	23
Cascading Updates and Deletes.....	25
Understanding Procedural Referential Integrity (Cascading Triggers).....	28
Exercise 3: Referential Integrity.....	29
Combining the Results of Multiple Queries (UNION).....	30
Using the UNION Operator.....	30
Sorting the Results.....	31
Using ALL to Include Duplicates.....	31
Using WHERE, GROUP BY, and HAVING Clauses.....	32
Storing the Query Results in a New Table.....	33
Comparing the Results of Multiple Queries (EXCEPT and INTERSECT).....	34
Using the EXCEPT Operator.....	34
Using the INTERSECT Operator.....	36
Exercise 4: UNION, EXCEPT, and INTERSECT.....	37

Summarizing Data Using UNION, ROLLUP, and CUBE.....	38
Using UNION to Display Detailed Data and Totals.....	38
Using ROLLUP to Calculate Subtotals and Grand Totals.....	40
Using CUBE to Calculate Subtotals and Grand Totals	41
Exercise 5: UNION, ROLLUP, and CUBE.....	43
Using PIVOT to Transform Your Query Results	45
Appendix A: Class Database Tables.....	48
Appendix B: Normalization.....	58
First Normal Form	58
Second Normal Form.....	58
Third Normal Form.....	58
Summary of Normalization.....	59
Appendix C: Database Programming Using Transact-SQL	60
Using Parameters to Supply Criteria to a Query.....	61
Using the CASE Function.....	62
Writing Triggers.....	64
Appendix D: Additional PIVOT Techniques	65
Creating More Complex Cross-Tabs	66
Saving Pivot Results as Views.....	67
Using the UNPIVOT Operator	67
Appendix E: Solutions to Exercises.....	69
