

Advanced System Administration of Windows Server 2003

Introduction.....	1
Windows Server Versions and Hardware Requirements.....	2
The Windows Server 2003 Family Editions.....	2
The Windows Server 2003 Family Editions Hardware Requirements.....	3
Managing Hardware.....	4
Activating Your Microsoft Product.....	4
Upgrading to Windows Server 2003.....	5
Planning for Windows Server 2003 Installation.....	6
Determining the Type of Server.....	6
Gathering Network Information.....	6
Choosing a File System: FAT or NTFS.....	7
Backing Up Data.....	8
Installing Windows Server 2003.....	9
Installing from Windows.....	9
Installing Across the Network.....	9
Performing a Local or Standalone Installation.....	9
Activating the Windows Server 2003.....	17
Defining Server Roles.....	17
Working with Active Directory (AD).....	18
Verifying the Computer Name.....	18
Understanding Active Directory Basics.....	19
Preparing for Active Directory Installation.....	19
Converting the NTFS 5 Partition.....	19
Domain Name System (DNS) Server.....	20
Assigning the Server the Domain Controller Role (Installing AD).....	21
Exercise 1: Active Directory.....	25
Verifying the Active Directory Installation.....	26
Windows Server 2003 Global Catalog Servers.....	29
Making a Domain Controller a Global Catalog Server.....	29
Universal Group Caching.....	29
Global Catalog and Domain Controller Server Placement Considerations.....	30
Protocols Supported by Windows Server 2003.....	31
TCP/IP Protocol.....	31

NWLink IPX/SPX Compatible Transport Protocol.....	31
TCP/IP Command Line Debugging Tools.....	32
Exercise 2: TCP/IP.....	38
Domain Name System (DNS) Server.....	39
Why DNS?.....	39
DNS Concepts.....	39
Delegation.....	40
DNS Domain Hierarchy.....	41
Recursive Name Resolution.....	41
The HOSTS and LMHOSTS Files.....	42
Namespaces: Public or Private.....	42
Understanding DNS Zones.....	42
Installing DNS.....	44
Configuring the DNS Server to Point to Itself.....	46
DNS Resource Records (RRs).....	47
DNS Configuration Files.....	50
Creating a New Forward Lookup Zone.....	51
Creating a New Reverse Lookup Zone.....	52
Creating New Domains.....	53
Adding Resource Records.....	53
Configuring Zone Transfers.....	54
DNS Queries.....	56
Root Hints.....	57
Forwarders.....	58
Dynamic DNS (DDNS).....	58
Converting a DNS Server to a Root DNS Server.....	59
Troubleshooting DNS.....	60
Exercise 3: DNS.....	66
Dynamic Host Configuration Protocol (DHCP).....	67
How DHCP Works.....	67
Automatic Addressing Without DHCP.....	67
Installing DHCP.....	68
Authorizing the DHCP Server.....	69
Configuring DHCP and DNS Interaction.....	70
DHCP Scopes.....	71
DHCP Security.....	72
Activating and Deactivating Scopes.....	74
Address Reservations.....	74
Configuring the Scope Options.....	75
Using Ipconfig to Release, Renew, or Verify a Lease.....	76
Superscopes.....	76
Multicast Scopes.....	78
DHCP Database Backup and Restore.....	78

DHCP Recommendations	79
Exercise 4: DHCP	80
Windows Internet Naming Service (WINS).....	81
Installing WINS	81
Preparing the Server for WINS.....	81
Enabling WINS Resolution for DNS	82
The WINS Database Files.....	83
Adding Replication Partners	83
Troubleshooting WINS.....	84
WINS Database Maintenance	85
Exercise 5: WINS	86
Troubleshooting and Recovery	87
Using the Boot Menu Options	87
Last Known Good Configuration.....	88
Backing Up and Restoring the System State	89
Automated System Recovery.....	92
The Recovery Console.....	95
Recovery Options.....	97
Troubleshooting Notes.....	98
Computer Management Utility	98
The System Tools: System Monitor and Performance Logs and Alerts.....	104
Windows File Protection and System File Checker	105
The Network Monitor	106
NetDiag.....	115
Appendix A: Online Resources	117
Appendix B: Solutions to Exercises 2-5	119
