

1	Lesson 1	1
1.1	Brief History of C++	1
1.2	Object Orientation	2
1.2.1	OO Development	2
1.3	Moving from C to C++	3
1.3.1	General program template	3
1.3.2	Keywords and identifiers	3
1.3.3	Comments	4
1.3.4	New console IO stream	4
1.3.5	Anywhere declaration/definition	4
1.3.6	Function prototypes	5
1.3.7	Parameterless functions	5
1.3.8	Alternative cast	5
1.3.9	Alternative initialization of intrinsic variables	6
1.3.10	Type-safe linking	6
1.3.11	Linking to C functions	6
1.3.12	Tags share namespace with identifiers	6
1.3.13	Improved enumerators	7
1.3.14	Internal <code>const</code> linkage	7
1.3.15	<code>const</code> on the interface	7
1.3.16	Scope operator	8
1.3.17	Namespaces	9
1.3.18	Header files	10
1.3.19	Selected input	10
1.3.20	Selected output and manipulators	11
1.4	Problem Session	13
2	Lesson 2	14
2.1	Dynamic Memory Allocation	14
2.1.1	Allocating single objects	14
2.1.2	Allocating arrays	16
2.2	Reference Variables	17
2.3	Problem Session	18
2.4	Exploring C++ Functions	19
2.4.1	Default arguments	19
2.4.2	Overloaded (polymorphic) functions	19
2.4.3	Inline functions	20
2.4.4	Functions and reference arguments	20
2.4.5	Function templates	22
2.5	Problem Session	23
3	Lesson 3	24
3.1	Class Basics	24
3.1.1	<code>class</code>	24
3.1.2	Objects	26
3.2	Problem Session	28
3.3	Constructors and Destructors	29
3.3.1	Destructor	29
3.3.2	Constructors	30
3.3.3	Array of objects	31
3.4	Problem Session	32

4	Lesson 4	33
4.1	Operator Overloading - Basics	33
	4.1.1 Unary operator	33
	4.1.2 Binary operator	34
4.2	Problem Session	35
4.3	Generalization/Specialization with Inheritance	36
	4.3.1 Initialization and basic inheritance	37
	4.3.2 Simple polymorphism (static binding)	39
4.4	Problem Session	40
