

Intermediate C# Programming

What You Will Learn.....	1
Understanding Object-Oriented Programming	2
Working with Classes	2
Understanding the Benefits of Object-Oriented Programming	3
Working with Objects	4
Creating New Objects	4
Using Variables to Reference Objects	5
Working with Dates	6
Creating <code>DateTime</code> Objects	6
Using the <code>DateTime</code> Structure	7
Formatting <code>DateTime</code> Values	11
Applying What You've Learned: Printing a Monthly Calendar (Optional)	13
Exercise 1: Creating Objects and Working with Dates	14
Creating New Classes	16
Defining a New Class	16
Organizing the Class Body	17
Declaring Member Variables (Fields)	18
Writing Constructors.....	19
Writing Properties.....	22
Writing Methods	24
Methods vs Properties.....	26
Creating New Objects Based on User-Defined Classes	27
Exercise 2: Writing Classes	28
Expanding the <code>Student</code> Class.....	31
Resolving Parameter Names in Constructors and Methods.....	31
Declaring Static Members.....	32
Using Programming Logic to Implement Your Methods	35
Overloading Methods.....	35
Streamlining Your Code	36
Exercise 3: Expanding Your Classes	38
Working with Collections	41
Creating a New Array List.....	41
Populating the Array List.....	42
Retrieving the Number of List Elements	43
Retrieving Array List Elements	43

Using Loops to Work with Collections	44
Changing Array List Elements.....	45
Removing Array List Elements	45
Comparing Arrays and Array Lists.....	46
Exercise 4: Working with Collections	47
Designing Effective Applications	49
Identifying the Required Classes	49
Achieving the Goal of Encapsulation	49
Defining Fields and Properties.....	50
Writing Methods	50
Writing Consistent Code.....	51
Modifying Your Application	51
Exercise 5: Designing Effective Classes.....	52
Understanding Inheritance	53
Using Inheritance in Your Own Classes.....	55
Using Polymorphic Variables	64
Exercise 6: Using Inheritance	67
Appendix A: Solutions to Exercises	71
