Advanced Topics in Visual Basic .NET: Data Access

What You Will Learn 1

Why Another Data Object Model? 2

Using the Data Form Wizard 3
- Using the Data Form Wizard with Microsoft Access Data 3
- Using the Data Form Wizard with SQL Server Data 11
- Building Forms with Multiple, Related Tables 13

Exercise 1 16

Building Data Forms with the Toolbox (SQL Server) 17
- Record Selection 23
- Using Calculated Fields to Select Records 24
- Simple Binding 25
- Data Views 25

Exercise 2 26

Programming the Dataset Object 27
- Creating a DataSet 27
- Adding Columns to Tables 28
- Adding Tables to the DataSet 29
- Adding Rows to Tables 29
- Binding Controls from Code 31
- Navigation with a Currency Manager 32

Maintaining Records with a Currency Manager 34

Exercise 3 35

Primary and Foreign Key Constraints 36
- Creating a DataRelation 37

Exercise 4 (Optional) 38

Connecting to Data Programmatically 39
- Searching for Data 41
- Maintaining Records 41
- Mapping Table Names 43

Exercise 5 44

Concurrency Control 45

Exercise 6 (Optional) 47

Appendix A: Designing Reports Using Crystal Reports 48

Appendix B: Navigation and Maintenance Without Binding 55
Displaying the DataSet 55
Navigation Without Binding 55
Updating Records Without Binding 56
Adding Records Without Binding 57
Deleting Records Without Binding 57

Appendix C: Working with DataGrid TableStyles 58

Appendix D: Creating an XML File 59

Appendix E: Solutions to Exercises 1-5 60
