

Introduction to Visual C# .NET Programming

Learning Microsoft Visual C# .NET	1
Using Visual Studio 2010	3
Creating a New Visual C# Project	3
Navigating the Visual Studio 2010 Environment	5
Designing a Graphical User Interface	7
Working with Objects	8
Working with Form Properties	9
Adding Controls to a Form	13
Setting the Control's Properties	15
Adding Code to Your Application	21
Viewing the Code Editor	21
Understanding the Structure of a C# Program	21
Renaming the Form	23
Understanding Event-Driven Programming	23
Handling Button Click Events	24
Running a C# Program	29
Running the Program	29
Debugging the Application	29
Using Text Boxes to Receive Text Input	31
Working with Text Boxes During Design Time	31
Retrieving Text Box Entries at Runtime	33
Exercise 1: Writing Simple Programs	34
Working with Local Variables	37
Declaring Local Variables	37
Specifying the Variable's Type	37
Naming Variables	39
Assigning Values to Variables	40
Working with Numeric Data	42
Converting Numeric Data to Strings	42
Performing Mathematical Operations	43
Using Constants	45
Converting Numeric Values to Strings	45
Formatting Strings	46
Using the Keyboard to Run a Button's Default Event	46

Exercise 2: Working with Numeric Data.....	47
Using if Statements to Make Decisions	49
Writing Simple if Statements.....	49
Writing if...else Statements.....	53
Using else if to Handle Multiple Conditions	54
Working with Complex Conditions	56
Using Message Boxes.....	58
Understanding the MessageBox.Show Method.....	58
Displaying an Error Message in the Price Calculator Application.....	59
Responding to Message Box Input	61
Exercise 3: Writing if Statements	63
Writing Loops	65
Writing while Loops	65
Writing do Loops	68
Writing for Loops	70
Exercise 4: Writing Loops	74
Using Combo Boxes	76
Adding a Combo Box to a Form.....	77
Understanding the Items Collection	77
Adding Items During Design Time.....	77
Allowing Text Entries.....	78
Responding to Combo Box Events.....	79
Retrieving Information about the Selected Item.....	80
Writing switch Statements	83
Using break Statements.....	85
Exercise 5: Using Combo Boxes	87
Working with Arrays	89
Understanding Instance Variables	89
Declaring an Array Variable.....	90
Creating the Array.....	91
Assigning Values to Array Elements.....	91
Using Loops to Process Array Elements	93
Generating Random Numbers.....	94

Using Radio Buttons, Check Boxes, List Boxes, and Track Bars	95
Using Radio Buttons to Change Text Color	96
Working with Fonts	99
Using Check Boxes to Change the Font Style	100
Using a List Box to Change the Font Name	102
Using a Track Bar to Change the Font Size.....	104
Exercise 6: Using Additional Controls	106
Appendix A: Solutions to Exercises	108
