

# Intermediate Power BI

What You Will Learn.....	1
Data Queries.....	2
Launching Query Editor .....	2
The Query Editor Ribbon.....	3
Query Editor Interface .....	5
Working with Columns and Rows.....	6
Reviewing Applied Steps.....	9
Sorting Data .....	10
Filtering Data .....	11
Changing Data Types.....	13
Close and Apply.....	14
Exercise 1 .....	15
Editing Queries .....	16
Replacing Values .....	16
Transforming Column Data .....	17
Exercise 2.....	21
Grouping Records.....	22
Creating Single-Field Groups .....	22
Creating Multi-Field Groups.....	23
Using Grouped Data in Visualizations .....	26
Exercise 3.....	27
Creating Data Relationships .....	28
Importing Data from Excel .....	28
Managing Relationships.....	30
Cardinality.....	33
Visualizations from Related Data .....	34
Drilling Down .....	35
Exercise 4.....	37
Advanced Visualizations .....	38
Special Project Exercise.....	41
Importing a Data Model.....	43
Import vs. Get Data.....	43
Appendix A: Solutions to Exercises .....	46

## What You Will Learn

**“80% of data scientists’ work is managing, tidying and cleaning data.  
Most of the other 20% is complaining about it.”**

**--Unknown**

In the Introduction to Power BI course you gained knowledge of the program’s basics including importing data sets from a variety of data sources. You learned how to navigate the program’s interface, manage report pages, and create several different data visualizations.

In this class, you will learn how to use the query editor to clean and shape raw data, in addition to other topics including:

- Loading data into the Power BI Query Editor
- Managing and editing data in both columns and rows
- Creating custom columns
- Eliminating columns or rows from a data set
- Sorting and filtering data
- Transforming data types
- Grouping data
- Creating data relationships
- Drilling down within data hierarchies
- Creating additional visualizations
- Importing an existing data model
